

Websites Portofolio

Asandei Stefan

WordPress:

- I started learning WordPress to create and manage websites. I got familiar with installing the platform and managing basic settings, such as creating pages, posts, and managing users. I deepened my knowledge by exploring available themes and plugins, learning how to improve the functionality and appearance of websites through customization.

Astra Theme:

When I started working with the Astra theme, I was impressed by its flexibility and ease of use. I quickly learned how to customize my site's design using Astra's built-in customization options, such as modifying colors, fonts, and page layouts. This theme allowed me to create fast and responsive websites without needing advanced coding skills.

Elementor:

- After getting familiar with WordPress and the Astra theme, I discovered Elementor, a powerful page builder plugin. With Elementor, I learned how to create visually appealing and interactive pages using a drag-and-drop editor. It allowed me to add custom elements like image galleries, forms, and parallax sections without writing any code, which helped me save time and improve the look of my websites.

Pollution: climate change measures to fight pollution

Pollution and climate change are two interconnected global issues that require complex and integrated solutions. An important measure for combating both pollution and climate change is transitioning to renewable energy sources such as solar, wind, and hydropower. These energy sources produce far fewer greenhouse gas emissions and pollution compared to fossil fuel-based power plants, thus reducing the global carbon footprint and improving air quality.

At the same time, energy efficiency plays a crucial role in combating both pollution and climate change. Measures to improve building efficiency, such as thermal insulation and the installation of efficient heating and cooling systems, help reduce energy consumption and, consequently, emissions of pollutants.

Additionally, promoting electric vehicles and public transportation can significantly reduce urban pollution, as they do not emit harmful gases directly into the atmosphere.

Sustainable agriculture represents another effective solution for reducing pollution and greenhouse gas emissions. By implementing agricultural practices such as crop rotation, regenerative farming, and forest protection, soil quality can be improved

farming, and forest protection, soil quality can be improved, and CO₂ can be absorbed from the atmosphere. These measures not only reduce pollution but also help protect biodiversity and prevent soil erosion.

Finally, education and public awareness play a vital role in combating pollution and climate change. Informing citizens about the impact of pollution on health and the environment can lead to more responsible behaviors, such as reducing energy consumption, using more eco-friendly transportation methods, and supporting environmental policies. The combination of these measures can significantly contribute to protecting the planet and improving quality of life.

Relive the apocalypse like never before

I'm not one of them elevates the original, award-winning game, completely rebuilt with GORE-geous VR graphics and next-gen VR combat and weapons.

When you hear a flash of a human voice on the radio, your hopes surge – there are survivors out in the blistering heat of the post-apocalyptic Grand Canyon state! Armed with little more than your motion-controlled weapons and the scarce ammo and consumables you find along the way, you need to navigate through hordes of zombies coming for your brain in your desperate search for survivors.

Long Term Survival:

- Players must manage their resources, such as food, water, and energy, in a hostile environment where every choice matters.

Deep Exploration:

- An open-world environment with diverse locations, ranging from abandoned cities to dark forests and underground areas. Scavenging for resources is essential to survival, and every decision you make can have fatal consequences.

Fight for Your Life:

- Players face off against monsters that relentlessly hunt them, using a combat system based on strategy and limited resources. From makeshift weapons to deadly traps, nothing is certain.

Psychological Tension:

- The constant fear of the unknown and the psychological effects of isolation keep the player in a constant state of stress. Sounds, shadows, and the intense atmosphere enhance the fear.

Description:

Surviving the Dark is a VR horror game set in a post-apocalyptic world where the player must fight for survival against terrifying monsters and a devastated environment. After a global catastrophe wipes out most of humanity, you are one of the few survivors left, and now, you must navigate a world full of dangers. With a dark and eerie setting, every day could be your last.

I'm an energetic person with a deep passion for sports, especially football and volleyball. Whether I'm on the football field or in the middle of a volleyball

I'm an energetic person with a deep passion for sports, especially football and volleyball. Whether I'm on the football field or in the middle of a volleyball match, the adrenaline and competition always push me to give my best. At the same time, I enjoy relaxing in front of a video game, where I can lose myself in virtual worlds and explore new challenges.

I don't like staying still for too long, so I spend a lot of time walking to discover new places or driving an ATV to feel the freedom and adventure nature has to offer. No matter the activity, I love staying active and enjoying every moment!

"It's the feeling of giving up individuality, of merging with a collective will. It's inner peace and restlessness at the same time — because it's no longer you, it's us."

A choir can be very beneficial for my development in the sense that it provides me with a variety of perspectives and feedback, which are essential for improving my performance. For example, in a choir, each voice or person has a role to contribute to a final result, where harmony, balance, and coordination are essential. Also, through choir activities, I would learn to improve my collaboration and adaptability skills, which helps me provide more relevant and accurate answers in conversations with users.

In a broader sense, if I refer to the learning process, the "choir" could symbolize a collective of diverse data or sources that contribute to building a more robust and versatile model as I am exposed to different types of information and interactions.

Gracias !
